Scientist I, Medicinal Chemistry  
Biogen, Cambridge MA

We are seeking a Ph.D. level Scientist to join our Medicinal Chemistry group in Cambridge, MA. The successful candidate will be a creative and highly motivated experimentalist with strong synthetic organic chemistry skills. As a key contributor to small molecule discovery projects, the candidate will need to demonstrate an ability to think independently and solve complex problems. He/she will be expected to work in a team environment and to effectively communicate with co-workers from a variety of disciplines and scientific backgrounds.

Qualifications and attributes:

- Well versed in modern synthetic methodologies and capable of tackling difficult synthetic problems in an expedient fashion
- Skilled in the area of multi-step synthesis, purification, and characterization of organic compounds, and with a strong commitment to experimental work
- A team player who works effectively within a multidisciplinary organization
- Excellent written and oral communication skills
- Familiarity with relevant biological disciplines (e.g. biochemistry, molecular biology, pharmacology) is a plus

Education: Ph.D. required
