Our Purpose: Breakthroughs that change patients’ lives.

At Pfizer we deliver Breakthroughs That Change Patients’ Lives. Pfizer’s Medicine Design group plays a vital role in this mission through the discovery of small molecule and synthetically-derived drugs. Discovering new medicines at Pfizer takes teams with a diversity of skills, behaviors, and backgrounds in a highly matrixed, dynamic, and multidisciplinary environment.

Kobi et al. (2020) have shown that successful Drug Discoveries display traits such as passion, hard work, organization, teamwork, courage, open-mindedness, curiosity—these are just some of the traits that successful Drug Discoverers display at Pfizer.

Pfizer Mission Statement

Our priority is researching and developing products and treatments that will benefit patients around the world. Our efforts in internal medicine, inflammation and immunology, biosimilars, rare disease, oncology, and vaccines, illustrate that we are committed to developing medical solutions that will matter most to the people we serve.
